

# Electric Vehicle Charging at GSFC?

## Not yet, but we're working on it.

### EV Charging for Personal Vehicles

GSFC can't legally provide charging services for personal vehicles directly, however, GSFC is working hard to facilitate EV charging through a private-sector partner.

### We need your input to help plan privately-run charging services

If you are interested in EV charging services on center, please contact the GSFC Sustainability Program Manager (Joel Donham) to learn more and provide your input: [joel.e.donham@nasa.gov](mailto:joel.e.donham@nasa.gov) 301-286-9922

### To those who have been hearing this for the last year:

Thank you for your continued support and patience. As silly as it sounds, in trying to facilitate this service we're attempting an unprecedented legal arrangement. It just takes time to get all our ducks in a row.

We know certain other federal facilities provide charging. We assure you, we've looked into their models and can confirm that they are not suitable for the physical layout and legal risk tolerance of Goddard.

### Interested (or curious) about all things EV? ...then plug in to the GSFC EV Club

- Join the club's mailing list to stay up to date on the local EV scene.
- Come to meetings to talk about EV technology, and the ups and downs of transitioning to EVs.
